DIVISION OF NOCO FORESTRY

ABOUT US

NOCO Forestry is committed to responsible management of carbon and organic waste streams. A new division of NOCO; Forestry has positioned itself to identify and repurpose waste materials from land clearing and construction sites into sustainable products such as compost, mulch, erosion control materials and wood stakes.

Our diverse range of products, including composts, mulches, and other soil blends, are meticulously crafted to support environmentally sustainable solutions. We take pride in the trust our customers place in us, as we remain steadfast in using only the highest-quality components and locally sourced ingredients. Our goal is to help agricultural efforts flourish and prioritize the health and well-being of local ecosystems, all while strengthening our commitment to environmental stewardship.

BIO RETENTION SOIL & CUSTOM BLENDS

Specialty soil blends and bio-retention mixes

- NYS DOT approved
- Sustainably sourced wood materials.

SILT SOCK & SILT FENCE

SILT SOCK

Silt sock is used in construction and landscaping to control erosion while managing sediment and runoff. When placed strategically along slopes, construction sites, or waterways, silt sock helps to filter and retain sediment and pollutants, preventing them from entering streams, rivers and other sensitive areas while allowing water to flow through. This erosion control measure helps protect water quality and soil stability.

Available in 8" to 12" x diameters

SILT FENCE

Silt fences are erosion control barriers designed to prevent the migration of sediment-laden runoff from construction sites, protecting natural waterways and ecosystems.

Available in non-wire backed, 54' per roll

Onsite installation available.

Please see pricing sheet for more information.

- Locally made in Western New York
- Sustainably sourced wood materials.

HARDWOOD STAKES & GRINDING SERVICES

HARDWOOD STAKES

Our wooden stakes are locally made in Western New York from hardwood trees and are made to order. They are darker in color, but have a smooth surface, few knots and more resistant to splitting than domestic pine.

All our wood products are of premium quality so you have little, if no, waste due to warped wood or knot holes.

- Available in Round Pointed Wood Lathe Stakes
- Used by surveyors, landscapers, gardeners, tree installations, fences, plow markers, and silt sock installations.

GRINDING SERVICES

Grinding and trucking services available to support land clearing and construction work including logging and site development.

Please see pricing sheet for more information.

- Suppresses weeds
- Retains moisture

NATURAL, DYED & BARK MULCH

NATURAL MULCH

No dyes, no additives. Our natural mulch retains moisture, insulates soil & and suppresses weeds. This product is ideal for use in residential and commercial landscapes. Applications range from home gardening projects to commercial solar array installations.

DYED MULCH

Powder dyed mulch maintains its color significantly longer than liquid dyed mulch. Beneficial properties are less color run, longer color retention and happier consumers.

BARK MULCH

It is a popular landscaping material used to suppress weed growth, retain soil moisture, and regulate soil temperature for healthier plant growth. When applied evenly around plants, it enhances the aesthetic appeal of garden beds and contributes to improved soil structure and nutrient content over time.

Available in bulk.

Please see pricing sheet for more information.

- Western New York's only STA Approved compost!
- Made in Buffalo, NY

BRIAN'S BEST COMPOST

Western New York's only STA Approved compost! Our compost goes through the US Composting Council's rigorous testing program called STA, which requires frequent testing and analytics. Our compost is made from a mix of fruits, vegetables, flowers, seaweed, and woodchips, plus materials from bakeries, breweries, distilleries, the **Buffalo Botanical Gardens**, and manure from the **Buffalo Zoo**.

Our packaging is made from 20% Post-Consumer Recycled Content.

After our product meets maturity we use a screener to create a finer material. Our screened product is ideal for landscaping, home garden projects, lawns and farms.

Available in bulk, 1 cubic yard super sacks and 1 cubic foot bags.

Fine & coarse material available.

Compliant with NYS DOT State standards certification for construction.

Please see pricing sheet for more information.

- Recycling partner of the Buffalo Zoo
- Uses manure from hoofed animals

BUFFALO ZOO POO COMPOST

We partnered with the Buffalo Zoo to turn manure and bedding from 14 species of hooved herbivores into a premium quality compost product. Through this partnership, we have prevented thousands of tons of organic material from going to landfill.

This Made in Buffalo product is the perfect blend to add organic matter to your soil and improve water retention. Ideal for use as a garden top dressing or as a soil amendment for indoor potted plants.

A perfect, unique gift for gardeners.

Available in bulk, 1 cubic yard super sacks and 3 pound boxes.

Please see pricing sheet for more information.

- Made to order
- Rich in organic matter

BIO RETENTION SOIL & CUSTOM BLENDS

Our materials are locally sourced and sustainably made. These custom blends are an excellent additive for gardens and specialty projects.

Benefits of soil blends:

- Blends notably increase porosity in dense soils, opening space for air exchange and promoting drainage. Properly drained and aerated soil is necessary to promote healthy root systems and beneficial microbes.
- Sustainable ingredients promote drainage and help reduce clumping in dense native soils; especially in vegetable gardens and sensitive house plant applications.
- Custom blends are available that do not contain peat moss, perlite, or coir. Instead, we use ingredients that are sustainable and locally sourced from existing waste streams in the WNY community.

Available in bulk and custom blends.

Please see pricing sheet for more information.

CUSTOMER TESTIMONIALS

Eastern Monarch Butterfly Farm

For over 25 years, we have promoted sustainable practices to conserve and enhance our local environment. Here at Eastern Monarch Butterfly and Native Plant Farm, we use TEND products in all of our projects and growing operations.

After visiting Buffalo River Compost and speaking with CEO Brian Murphy, I was assured that these products are tested and are the highest quality in WNY.

David O'Donnell

Eastern Monarch Butterfly and Native Plant Farm.

“This is a boon to any garden!”

We...are very impressed with your taking garden waste and turning it into garden compost. Every plant in my garden has sprung up and crowded its neighbors. This is a boon to any garden!

Miriam Dow

Buffalo, NY

“... give your plants the tools to thrive!”

Tend's Zoo Poo is an amazing product that helps us at the Zoo achieve core conservational goals and beautify our plantings. Zoo Poo takes what would normally be a waste product, keeps it local, and naturally converts it into an amazingly effective product!

The Zoo Poo is an amazing amendment, media, and fertilizer packed with natural beneficial microbes and organic nutrients. Zoo Poo will not only help your plants in the traditional sense but offer support long term by providing beneficial microbial communities and organically assessable nutrients.

We highly recommend Zoo Poo for any and all gardens regardless of skill level, scale, or system; Zoo Poo will give your plants the tools to thrive!

Nathan Huff

Curator of Horticulture at the Buffalo Zoo

Terrific!

We have been dedicated vegetable gardeners for some 50 years now, the last 40 or so in our North Buffalo home. We inherited a decent plot and soil from previous owners and the results of our gardening efforts were always acceptable.

Ten years ago, we decided to dig up and extend our garden plot, adding more area, while turning it into a rain garden. In order to continue vegetable gardening, we added 8 large raised beds on top of the rain garden, filling them in with [tend] compost provided by FGI Landscaping.

It was the best decision we've ever made. Every two or three years, we top-off the compost; and two-years ago we raised each bed an additional ten inches. The results have been terrific: better yields, hardly plant growth, and very reliable planting and growing conditions from year-to-year.

James

North Buffalo resident

Check Out NOCO's Other Services

Environmental Services

Used oil and water collection and recycling. Vac truck service for oil water separators. Hazardous and non-hazardous drum waste.

Diesel / Gasoline

Bulk supply of fuel filled into tanks or fleet fueling options

Heating Oil / Propane

Bulk supply of heating fuels

Natural Gas

Supply of natural gas for businesses

Electricity

Supply of electricity for businesses

HVAC

Installation and service of heating, cooling, and air purification systems

Lighting & Electrical

Contractor parts, supplies, lighting as well as decorative fixtures

Generators

Installation, sales, maintenance, and repairs

Geothermal Heating & Cooling

Heating and cooling using the Earth's energy

Glycol

Heat transfer fluids for heating, cooling, process, geothermal, ice rinks, etc.

Forestry

- STA approved compost, and natural/dyed mulch products
- NYS DOT approved silt sock, erosion control products, wood/tree stakes
- Organic waste recycling available
- Grinding and trucking services available with back-haul options, contact for details

GIS/Digital Marketing

Targeted GIS analytic solutions to help grow businesses
